PROTOCOL-422-SITREP-AUG-20-2026-CORRECTED-RECORD

V10.5.2 — 24h Record — M≥5.0 Enforced — 5 Events — Mean 1.615h — Kinetic Section Corrected

KINGDOM RECORDS / DAILY SITUATION REPORT & HARDENED AUDIT

Date: 2026-08-20 | Scan Window: 2026-08-19 06:51:00 UTC to 2026-08-20 06:51:00 UTC (24h)
Report Number: 2026-08-20-001-CORRECTED | Status: Corrected Record — Kinetic Domain Re-Sourced | Record Version: V10.5.2-CORR

CORRECTION NOTICE: The original Aug 20 2026 record's Section III described "Gideon's Chariots II" (Katz approval, 60,000 reservist callup, Sabra/Zeitoun tank advance, Kfir Brigade Khan Yunis contact) as occurring within the Aug 19–20, 2026 scan window. Independent source-checking found these specific details match reporting from **August 19–20, 2025** — one year earlier — not 2026. This section has been replaced below with events independently verified against AP, Reuters, Al Jazeera, Haaretz, and Washington Post reporting dated to the actual Aug 19, 2026 window. No WAI/PAI sub-scores below have been recalculated against the corrected text; recomputing them would require the same kind of unverifiable subjective judgment calls flagged elsewhere, so that scoring layer is left marked as requiring manual review rather than re-estimated.

I. EXECUTIVE SUMMARY

Scan Window 2026-08-19 06:51:00 UTC to 2026-08-20 06:51:00 UTC: 5 M≥5.0 events recorded in the supplied USGS-reviewed feed — 3x Flores Sea Indonesia (M5.5, M5.2, M5.8), 1x Kuril Islands M5.4, 1x Fiji M5.4. Mean inter-event Δt = 1.615h, median 1.232h, Bonferroni α=0.0125 with 4 intervals — independently reverified against raw USGS CSV, confirmed accurate. Maritime Hardware: No new verified incident in window; last verified projectile strike was Aug 18 bulk carrier Minoan Dignity outbound Strait of Hormuz. **Kinetic Hardware (CORRECTED):** Israeli airstrikes killed at least 10 Palestinians in two separate attacks in Gaza — a Gaza City police headquarters and the Nuseirat refugee camp — on Aug 19, 2026, amid a fragile ceasefire and U.S.-brokered disarmament talks (Kushner-led). The strikes drew criticism from Hamas and concern from U.S. negotiators that they undermine the ceasefire process. Separately, the UAE suspended trade and financial transactions with Iran on Aug 19, related to the earlier missile-detection dispute. Volcanic: No new verified incident in window; last VAAC advisory 2026-08-12, PHIVOLCS Alert Level 3 ongoing background.

II. STRAIT OF HORMUZ / MARITIME HARDWARE

Status: Quiet — No New Verified Incident in Window. Last verified incident remains the Aug 18 Minoan Dignity strike (engine-room damage, chief engineer fatality), classified as background continuing activity, not new. No new UKMTO advisory dated inside the Aug 19–20 window.

III. GEOPOLITICAL / KINETIC HARDWARE — CORRECTED

Status: Verified Incident Recorded — Escalation Indeterminate. On Aug 19, 2026, Israeli strikes killed at least 10 Palestinians in two separate attacks: medics reported nine bodies received at al-Shifa Hospital following a strike on a Gaza City municipal police headquarters, and a separate strike hit the Nuseirat refugee camp in central Gaza; roughly 15 additional people were wounded. The IDF said it targeted a Hamas platoon commander connected to the October 7, 2023 attacks. This came two days after U.S. negotiators reportedly pressed Israel to draw down attacks under the ceasefire/disarmament framework brokered with U.S. envoy Jared Kushner's involvement; Hamas and Palestinian Islamic Jihad publicly accused Israel of undermining the process. Separately on Aug 19, the UAE announced suspension of trade and financial transactions with Iran, connected to the prior ballistic-missile detection dispute (Aug 18). Attribution for the strikes is not in dispute (IDF-acknowledged); the disputed elements are proportionality/target characterization, which are not physical-domain hardware facts. Escalation kept at Indeterminate — a strike-and-casualty event within an active but nominal ceasefire does not by itself meet a strategic-domain-expansion threshold. Note: no ground offensive ("Gideon's Chariots II" or equivalent) was independently verified as active within this window.

IV. GLOBAL SEISMIC HARDWARE — M≥5.0 ENFORCED

Time UTC	Mag	Type	Location	Depth	ID
2026-08-19T16:17:38.400Z	5.5	mww	52 km NNE of Ruteng, Indonesia	10.0	us6000tlxq
2026-08-19T18:07:17.251Z	5.4	mww	134 km S of Severo-Kuril'sk, Russia	41.176	us6000tlyv
2026-08-19T18:45:29.754Z	5.4	mww	215 km E of Levuka, Fiji	556.753	us6000tlz8
2026-08-19T22:28:08.388Z	5.2	mb	33 km N of Ruteng, Indonesia	10.0	us6000tm0s
2026-08-19T22:45:17.395Z	5.8	mww	25 km NNE of Ruteng, Indonesia	10.0	us6000tm0u

Independently reverified against raw USGS CSV export — all times, magnitudes, depths, and IDs confirmed accurate. Methodology Deviation: NO — M≥5.0 enforced.

V. VOLCANIC ACTIVITY

Status: Quiet — No New Verified Incident in Window. Mayon remains PHIVOLCS Alert Level 3, last VAAC advisory dated 2026-08-12 — outside window. No new eruption threshold met.

VI. SOFTWARE / ΔT CALCULATION — DATA DISCIPLINE MAINTAINED

Event Pair	Δt Hours	Δt Minutes	Calculation
T2-T1	1.827	109.6	134 km S of Severo-Kuril'sk, Russia — interval 1
T3-T2	0.637	38.2	215 km E of Levuka, Fiji — interval 2
T4-T3	3.711	222.6	33 km N of Ruteng, Indonesia — interval 3
T5-T4	0.286	17.2	25 km NNE of Ruteng, Indonesia — interval 4
Mean	**1.615**	**96.9**	**4 intervals from 5 M≥5.0 events**
Median	**1.232**	**73.9**	—

Independently recalculated by hand from raw timestamps — mean and median confirmed exact. Bonferroni α = 0.05/4 = 0.0125. No preregistered single target tested. Significance undetermined (n=5, requires n≥30).

VII–XVI

Sections VII (Compression Analysis), VIII (Theological layer), IX (Convergence Matrix), X (Fact/Interpretation), XI (Alternatives), XII (Matthew 24 Tracker), XIII (WAI/PAI), XIV (Thresholds), XV (Miss Log), and XVI (Dashboard) from the original record referenced the now-corrected Section III content in their Kinetic-related rows and rationale. Those numeric sub-scores (Biblical Correspondence, Empirical Evidence, etc.) are NOT reproduced here with new invented values — they should be manually re-assessed against the corrected Section III text above if this record is to replace the original archived version, rather than auto-generated from it.

Corrected Record — Aug 20, 2026 — Kinetic section re-sourced from independently verified reporting. Seismic and maritime sections reverified against primary data (USGS CSV, UKMTO). Volcanic section unchanged (no new activity in window).
Original template/methodology reference: The Boulder Folder — https://archive.org/details/@scottflorida/lists/3/the-boulder-folder
This corrected version is provided as an edit to the original 2026-08-20-001 record and is not itself an "official" Protocol 422 output — it reflects an independent fact-check.
